

**I CLAIM:**

1. A cleansing device comprising:

a cleansing cloth including a base fabric layer, a cover fabric layer disposed above said base fabric layer, and a plurality of fibers  
5 disposed between and secured between said base and said cover fabric layers, and

a handle attached to said cleansing cloth to carry and operate said cleansing cloth.

2. The cleansing device as claimed in claim 1, wherein said  
10 base fabric layer includes at least one side having a plurality of strips formed therein to partially expose said fibers.

3. The cleansing device as claimed in claim 1, wherein said cover fabric layer includes at least one side having a plurality of strips formed therein to partially expose said fibers.

15 4. The cleansing device as claimed in claim 1 further comprising an outer fabric layer attached onto said cover fabric layer, and secured to said cover fabric layer to form at least one pocket and to receive said handle.

5. The cleansing device as claimed in claim 4, wherein said  
20 cleansing cloth includes two welding portions provided on said outer and said cover fabric layers, to secure said outer and said cover fabric layers together, and to form said at least one pocket in said cleansing cloth.

6. The cleansing device as claimed in claim 5, wherein said  
25 cleansing cloth includes two second welding portions provided on said outer and said cover fabric layers, and arranged between said welding portions to separate said at least one pocket into two

pockets.

7. The cleansing device as claimed in claim 6, wherein said cleansing cloth includes a cut line partially formed between said second welding portions to allow said two pockets to be partially  
5 separated from each other.

8. The cleansing device as claimed in claim 7, wherein said cleansing cloth includes at least one fiber coupled between said two pockets, to breakably couple said two pockets together.

9. The cleansing device as claimed in claim 4, wherein said  
10 cleansing cloth includes one end having a welding portion provided thereon, to form a closed end for said at least one pocket.

10. The cleansing device as claimed in claim 4, wherein said cover fabric layer includes a length greater than that of said cover fabric layer to facilitate an engagement of said handle into said at  
15 least one pocket of said cleansing cloth.

11. The cleansing device as claimed in claim 1, wherein said handle includes a fork having two arms engageable into said at least one pocket of said cleansing cloth.

12. The cleansing device as claimed in claim 11, wherein said  
20 handle includes at least one projection extended from each of said arms, for frictionally engaging with said cleansing cloth.

13. The cleansing device as claimed in claim 11, wherein said handle includes a hand grip pivotally attached to said fork, to allow said hand grip to be rotated relative to said fork between an  
25 outwardly extending position and an inwardly folding position.

14. The cleansing device as claimed in claim 13 further comprising means for retaining said hand grip to said fork at said

outwardly extending position.

15. The cleansing device as claimed in claim 13, wherein said retaining means includes at least one notch formed in said hand grip, and at least one catch extended from said fork and engageable into  
5 said at least one notch of said hand grip.
